

Target Audience

Hotel Managers

Data Story

Hotel bookings spike, and cancellations happen unexpectedly. By analyzing 119,000+ bookings, we uncovered key trends in pricing, guest behavior, and seasonality—providing insights that help hotels thrive.

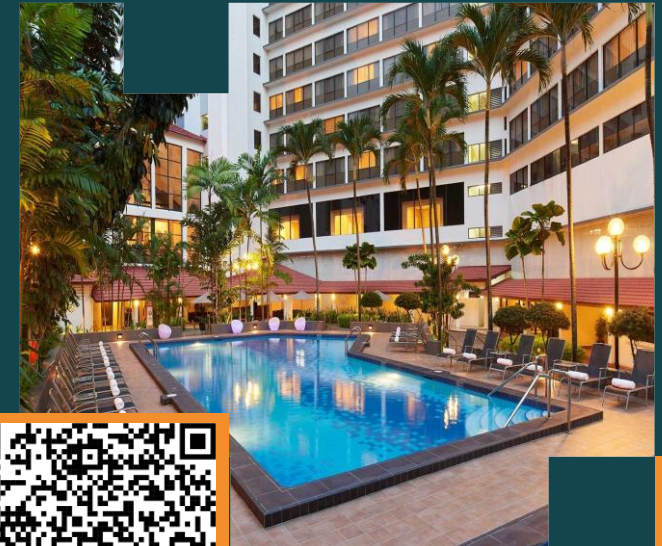

Main Task

Reveal booking trends and guest behaviors to help hotel managers boost revenue, reduce cancellations, and plan for peak periods

“Slip on your sharp hotel manager’s blazer, For the next few minutes, you’re the decision-maker for high-stakes decisions from maximizing hotel revenue to reducing cancellations, and planning for peak periods.”

Welcome, Hotel Managers!

Dataset Overview : Hotel Bookings

- **Source:** Kaggle (Hotel Bookings Analysis by qucwang)
- **Records:** ~119,000 hotel booking entries (2015–2017)
- **Hotel Types:** City Hotel & Resort Hotel - Both hotels are located in Portugal: H1 at the resort region of **Algarve** and H2 at the city of **Lisbon**.
- **Columns:** 32 features including:
 - a. Booking details (lead time, dates)
 - b. Guest details (country, customer type, market segment)
 - c. Stay information (weekend/weekday nights)
 - d. Financial data (ADR, deposit type, special requests)
 - e. Cancellation status

Project Objective

To assist **hotel managers** in making data-driven decisions that enhance revenue, improve operational efficiency, and reduce cancellations. By analyzing booking patterns, pricing trends, and customer behaviors using real-world data, we help uncover trends to address research questions.

Research questions addressed:

1. When are the busiest months for bookings, and how do resort and city hotels differ?
2. Do demanding guests pay more or cancel more?
3. Which customer type pays more and cancels less? – Guaranteed revenue.
4. Which customer types are most likely to cancel?
5. How long might each type of guest stay?

Dashboard design expectations

For a Hotel Manager

Business Expectations:

- Show key performance metrics clearly: bookings, revenue, cancellations.
- Enable quick comparison between hotel types, seasons, and customer segments.

UI/UX Expectations:

- Simple and intuitive layout – minimal clicks to get key info.
- Consistent color coding (e.g., red for cancellations, green for revenue).

Business Intelligence Dashboard Developer

- Clear business objectives and key questions
- Access to relevant and complete datasets
- Clean and consistent data formats
- Unique identifiers for customers and bookings
- Information on promotions or special events
